L'atelier RGPD (CNIL GDPR MOOC)

SST (First Aid Response equivalent)
December 2024 – December 2026

WORK HISTORY

05/2022 - 10/2025
ADSN, Aix en Provence area, France
Lead Software Engineer

01/2021 - 04/2022
Monext, Aix en Provence, France
Confirmed Software Engineer

09/2018 - 12/2020
Extia, Aix en Provence, France
Software Engineer Consultant

09/2013 - 06/2018
Natixis, Paris area, France
Software Engineer
Worked 4 months on-site in Poland within a software vendor team (*English daily*)

09/2012 - 09/2013
SCFI, Paris, France
Web Developer and Integrator

EDUCATION

09/2013 - 09/2015
AFTI, Orsay, France
ETGL
Software engineering expertise
master level

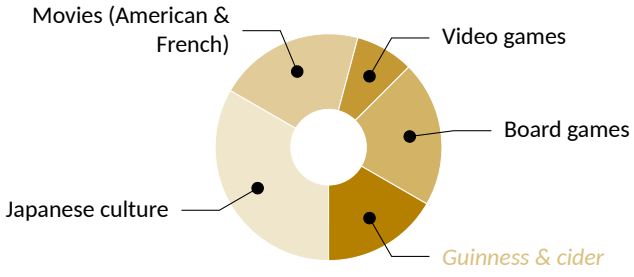

09/2012 - 09/2013
UPEC, Fontainebleau, France
Licence Professionnelle BDISe
Database, internet and security expertise
bachelor level

09/2009 - 06/2012
UPEC, Fontainebleau, France
DUT Informatique
Global IT expertise
university 2nd degree

GENERAL SKILLS

Java 25 | **Spring Boot 3** (*integration*, *batch*, *data*, *security*) | PL/SQL
Angular 21 (*standalone*, *signals*) | Material | PrimeNG | Tailwind
Module Federation | API-First (*OAS*) | DDD | UML | TDD | E2E
Banking | **Payments** | Healthcare | Telecom | Defense | **Notary**

INTERESTS

ADSN - LEAD SOFTWARE ENGINEER

08/2024 - 10/2025

Technical co-leadership on a nationwide apostilles and legalizations platform for the French notariat, a critical project supporting the profession's digital transformation and compliance requirements.

Key Responsibilities

- Coordinated the daily work of eight developers through technical guidance, task allocation, code reviews, and delivery follow-up.
- Co-led the technical design and implementation of the platform, ensuring compliance with legal, security, and interoperability requirements.
- Developed and maintained backend and frontend components, including REST APIs (Spring Boot), business services, security layers, and Angular user interfaces.
- Maintained and upgraded frameworks and dependencies to mitigate known security vulnerabilities (CVEs) and improve platform stability.
- Implemented automated testing and CI/CD pipelines while contributing to delivery planning and stakeholder follow-up.
- Collaborated with integration, qualification, and operations teams to investigate issues, support deployments, and ensure smooth production readiness.
- Participated in critical production rollouts, including deployment support, live monitoring, issue resolution, and post-release stabilization.

Technologies & Tools

Java | Spring Boot (*web*, *security*, *batch*, *data*) | Keycloak (*OpenID Connect*, *OAuth2*) | OpenAPI (*Swagger*) | Angular | Bootstrap | PrimeNG | Cypress | IntelliJ | Bitbucket | GitKraken | Bamboo | Jira | Figma | Oracle SQL | Linux | Docker

ADSN - LEAD SOFTWARE ENGINEER

09/2023 - 07/2024
Technical leadership on ECA (Espace Client ADSN), a modular micro-frontend platform designed to centralize access to ADSN web applications for the French notariat.

Key Responsibilities

- Led a team of two developers through technical guidance, task coordination, code reviews, and architectural decision-making.
- Designed (with my architect) and implemented the platform architecture from scratch using Angular Module Federation and distributed Spring Boot APIs.
- Developed a modular ecosystem composed of a central portal and multiple independently deployed micro-frontend applications.
- Collaborated with other development portfolios to integrate externally developed modules into the platform ecosystem.
- Developed shared libraries and transversal features, including authentication and authorization mechanisms based on Keycloak and internal standards.
- Integrated user interfaces from Figma mockups into the portal and micro-frontend applications while maintaining UI consistency across the platform.
- Implemented automated testing and CI/CD pipelines to improve code quality and deployment reliability.
- Collaborated with integration, qualification, and operations teams to investigate issues, support deployments, and ensure smooth production readiness.

Technologies & Tools

Java | Spring Boot (*web*, *security*, *batch*, *data*) | Keycloak (*OpenID Connect*) | OpenAPI (*Swagger*) | Angular | Bootstrap | Tailwind | Module Federation | IntelliJ | Bitbucket | GitKraken | Bamboo | Jira | Figma | Oracle SQL | Linux | Docker

ADSN - CONFIRMED SOFTWARE ENGINEER

05/2022 - 08/2023

Technical contributions across multiple applications within ADSN's Central Files portfolio, focusing on high-priority developments and critical services for the French notariat.

Key Responsibilities

- Contributed to multiple business-critical applications within the ADSN portfolio, including FCDDV (centralized wills registry), BRI (real estate reference database), and the notariat's centralized videoconferencing directory.
- Developed and maintained backend services and batch-processing applications using Spring technologies across multiple projects.
- Developed frontend and backend features for FCDDV using Angular and Spring-based REST APIs.
- Reworked the public homepage of FCDDV by integrating user interfaces from Figma mockups into the existing platform.
- Participated in the design and implementation of inter-application communication mechanisms and backend integrations across multiple services.
- Investigated and resolved complex technical issues across multiple applications and environments while contributing to implementation and maintainability discussions.
- Collaborated with integration, qualification, and operations teams to support deployments, issue investigation, and delivery activities.

Technologies & Tools

MONEXT - CONFIRMED SOFTWARE ENGINEER

01/2021 - 04/2022
Technical contributions to high-volume payment acquisition systems within the PayAvenue platform, processing millions of daily transactions for major retailers and acquiring banks in a PCI DSS environment.

Key Responsibilities

- Developed and maintained Spring Batch acquisition workflows handling retailer integrations, protocol conversion, aggregation processing, and outgoing bank file generation.
- Worked daily with banking standards such as CB2A, CB2C, NEXO, and JCB, including legacy hexadecimal formats, field mapping constraints, and bank-specific implementations.
- Contributed to secure payment-processing systems within a PCI DSS environment, including PAN tokenization, hashing mechanisms, and transaction integrity constraints.
- Delivered features and maintenance evolutions on critical acquisition services processing hundreds of thousands to millions of transactions per day.
- Participated in refactoring, integration activities, production issue investigations, and Jenkins pipeline improvements for qualification and deployment workflows.
- Developed selected administration interfaces using Vaadin alongside backend payment-processing applications.

Technologies & Tools

Java | Spring Boot (*batch*, *data*) | Maven | Vaadin | Payment protocols (*CB2A*, *CB2C*, *NEXO*, *JCB*) | Security (*PCI DSS*, *PAN tokenization*, *hashing*, *RSA*) | Jenkins | GitLab | GitKraken | Docker | Oracle SQL Developer | IntelliJ

EXTIA - FULL-STACK CONSULTANT

09/2020 - 12/2020 (mission at Orange)
Technical contributions to Orange pricing and catalog management applications, supporting internal services used to manage telecom offers, pricing rules, and batch-processing workflows.

Key Responsibilities

- Contributed to the maintenance and evolution of pricing and catalog management applications used across Orange internal systems.
- Developed backend and frontend features using Spring Boot and Angular within a full-stack product team.
- Designed and implemented a monitoring dashboard for Spring Batch workflows using Spring Actuator and Material to provide real-time operational visibility.
- Developed orchestration APIs and monitoring features allowing operational teams to supervise and interact with batch-processing workflows across the product ecosystem.
- Built a full-stack proof of concept combining Angular dashboards, refresh mechanisms, and batch-monitoring endpoints to validate the technical approach for the monitoring platform.
- Worked autonomously on transverse monitoring topics after rapidly gaining the trust of the technical lead and project team.
- Collaborated with qualification teams to support feature validation and delivery preparation.

Technologies & Tools

Java | Spring Boot (*web*, *security*, *actuator*, *batch*, *data*) | Angular | Material | REST APIs | Batch orchestration | Monitoring | IntelliJ | Docker | GitLab | Oracle

AVIS2SANTÉ (*MISSION*)

04/2020 - 08/2020

AVIS2SANTÉ is a small French health-tech company developing telemedicine and digital health software for healthcare professionals and patients.
It builds secure web-based tools for appointment management, medical consultation and information sharing between practitioners and patients, aiming to support digital health services.

Six Fours Les Plages, France
avis2sante.fr

EXTIA - FULL-STACK CONSULTANT

04/2020 - 08/2020 (mission at AVIS2SANTÉ)
Technical contributions across multiple web and mobile initiatives at AVIS2SANTÉ (A2S), a healthcare-oriented SME, supporting web platform evolution, connected-device integrations, and development process improvements during the COVID period.

Key Responsibilities

- Developed Joomla modules and integrations for healthcare-oriented web platforms, including appointment scheduling features and Stripe payment modules.
- Implemented reusable JavaScript-based frontend integrations within Joomla environments using lightweight libraries and custom module architectures.
- Contributed to the development of an Android proof of concept for connected-health synchronization using Kotlin and Android Studio.
- Worked on integrations with Withings and Google Fit APIs to synchronize health-monitoring data between connected devices and A2S healthcare platforms.
- Participated in the design of mobile synchronization workflows, local storage mechanisms, and backend synchronization processes with Joomla-based services.
- Assisted and technically supported an Android/Kotlin apprentice developer while contributing to architecture discussions around the mobile application.
- Collaborated with the CTO on development process improvements, including the implementation of GitLab-based version-control workflows and shared development practices.
- Worked with high autonomy in a small multidisciplinary team, regularly presenting progress and proof-of-concept demonstrations to technical and business stakeholders.

Technologies & Tools

PHP | Joomla | JavaScript | jQuery-style libraries | Kotlin | Android Studio | Google Fit | Withings APIs | Stripe APIs | GitLab | Docker

EXTIA - FULL-STACK CONSULTANT

12/2018 - 03/2020 (mission at Monext)
Technical contributions to the PayAvenue payment platform at Monext, focusing on high-volume payment acquisition workflows and banking protocol integrations for major retail customers.

Key Responsibilities

- Developed and maintained Spring Batch processing flows for payment acquisition services handling large-scale retailer transaction workflows.
- Contributed to the implementation of Carrefour acquisition flows using NEXO protocols, supporting the transition from legacy banking formats such as CB2A and CB2C.
- Participated in the development of multi-acquisition workflows allowing several daily acquisition exchanges instead of a single end-of-day processing cycle.
- Implemented protocol conversion and banking integration logic between retailer payment systems and multiple acquiring banks.
- Worked on critical payment-processing constraints including acquisition scheduling windows, transaction aggregation, secure exchanges, and large transaction volumes.
- Contributed to maintenance, technical investigations, and evolution of payment-processing services within a PCI DSS environment.
- Participated in integration activities, qualification support, and delivery preparation for payment-processing applications.

Technologies & Tools

Java | Spring Boot (*batch*, *data*) | Maven | Payment protocols (*CB2A*, *NEXO*) | Security (*PCI DSS*, *hashing*, *RSA*) | Jenkins | Docker | SVN | Tortoise | Oracle | Eclipse

DOCAPOST (*MISSION*)

09/2018 - 12/2018

Docaposte is the digital subsidiary of Groupe La Poste, providing secure digital trust and transformation solutions to businesses and public institutions.
It delivers trusted services such as electronic signature, digital archiving, secure data exchange and platform integration, supporting regulated digital processes and large‑scale digital transformations across sectors including public services, healthcare and finance.
Groupe La Poste is a major French postal and logistics group, delivering mail, parcel, banking, and digital services nationwide and internationally.
It operates as a public service provider in France, serving millions of customers and supporting both private and institutional clients across various sectors.

Aix en Provence, France
docaposte.com

EXTIA - FULL-STACK CONSULTANT

09/2018 - 12/2018 (mission at Docapost)
Technical contributions to Docapost's vehicle registration platform for La Poste, supporting digitalized registration workflows and internal document-management operations following the opening of the French vehicle registration market.

Key Responsibilities

- Contributed to internal web applications supporting vehicle-registration workflows and document-management operations within Docapost's BPO services.
- Developed a Spring MVC and Bootstrap-based back-office application from scratch to assist Level 3 support teams in tracking and investigating registration cases.
- Implemented REST API integrations with centralized backend reference services used across web and mobile applications within the project ecosystem.
- Developed frontend views and backend controllers using Spring MVC, JSP, and Bootstrap within a Java enterprise environment.
- Collaborated with senior backend developers to evolve reference APIs and implement additional endpoints required for operational workflows.
- Worked with high autonomy on urgent operational tooling requirements shortly after joining the project team.
- Participated in qualification support, integration activities, and deployment preparation on Tomcat environments.

NATIXIS - SOFTWARE ENGINEER

02/2016 - 06/2018

Technical contributions to the PGP, BIC, and IP projects within Natixis Payment Solutions, focused on integrating the Open Payment Framework (OPF) into BPCE Group payment-processing systems and interbank workflows.

Key Responsibilities

- Contributed to the integration of the Open Payment Framework (OPF) within BPCE Group payment-processing ecosystems for internal banking exchanges, interbank markets, and instant payment initiatives.
- Developed and maintained Spring Integration batch workflows handling file-based payment exchanges and MQ-driven integration processes between BPCE systems and OPF components.
- Worked on integration frameworks dedicated to PGP, BIC, and IP payment-processing flows, including deployment and orchestration topics within Jenkins and XL Deploy environments.
- Participated in the implementation of Instant Payment services related to PSD2 regulatory evolution and real-time banking workflows.
- Contributed to enterprise integration workflows involving SWIFT, SEPA, and interbank exchange ecosystems.
- Collaborated with operations teams on deployment preparation, integration workflows, and production rollouts across development, qualification, and benchmark environments.
- Participated in production rollouts and operational support activities for critical payment-processing integrations within the BPCE banking ecosystem.

Technologies & Tools

NATIXIS - TRAINING PROGRAM

10/2015 - 01/2016
Technical training program within FIS/Clear2Pay development teams in Warsaw, Poland, focused on the Open Payment Framework (OPF), enterprise payment-processing workflows, and international development practices.

Key Responsibilities

- Integrated directly into Clear2Pay development teams to contribute to the evolution and maintenance of OPF enterprise payment-processing components.
- Worked on OPF user-interface components, BPEL orchestration workflows, and enterprise banking integrations within a large-scale payment-processing ecosystem.
- Contributed to debugging, feature adjustments, localization fixes, and workflow corrections across enterprise payment-processing applications.
- Participated in structured enterprise development processes involving Jira workflows, technical QA validation, and TDD-oriented delivery practices.
- Worked daily in English within an international team composed mainly of Polish collaborators across development, QA, business analysis, and technical leadership roles.
- Developed practical experience with banking XML formats, enterprise orchestration workflows, and large-scale payment-processing architectures.
- Acquired strong exposure to enterprise software-engineering practices used within an international payment technology vendor environment.

NATIXIS - SOFTWARE DEVELOPER

09/2013 - 09/2015

Work-study program contributing to DEFI, a retail securities custody platform used by Natixis Eurotitres to manage PEA and securities-account services for multiple banking networks within and outside the BPCE Group.

Key Responsibilities

- Contributed to the development and maintenance of OIC and Platine, two white-label web platforms dedicated respectively to public customers and banking-agency operations.
- Developed administration interfaces and business-support screens using Java, JSP, Hibernate, and IBM WebSphere technologies within a Java enterprise environment.
- Implemented frontend interactions and UI behaviors using HTML, CSS, JSP, and jQuery-based technologies, including drag-and-drop interactions on customer-facing applications.
- Worked on Oracle database mappings and business object integrations using Hibernate to replace manual SQL-based workflows.
- Developed middleware-oriented tooling to analyze and visualize message flows exchanged between Java applications and the DEFI COBOL mainframe backend systems.
- Participated in the implementation of analytics and usage-tracking solutions across customer-facing and agency-facing platforms.
- Contributed to qualification support and deployment preparation activities within large-scale enterprise banking environments.
- Rapidly gained autonomy on assigned development topics while working within structured enterprise software-engineering processes.

Technologies & Tools

Java | Hibernate | JSP (*JSTL*, *custom taglibs*) | HTML | CSS | jQuery | Google Analytics | RSA | WebSphere | Tomcat | Jenkins | XL Deploy | Serena Dimensions | Oracle | Eclipse

SCFI - WEB DEVELOPER AND INTEGRATOR

09/2012 - 09/2013
Technical contributions to various web development projects during a work-study program, including corporate websites, internal business applications, and e-commerce platforms.

Key Responsibilities

- Contributed to the maintenance and evolution of an intranet platform used by a nonprofit home-care association for scheduling, invoicing, payroll, and operational workflows.
- Participated in regular client meetings to gather feedback, discuss operational needs, and adjust application features accordingly.
- Maintained and improved the company's internal CMS and associated administration tools.
- Contributed to maintenance and feature updates for e-commerce and corporate web platforms.
- Developed frontend and backend web components using ASP, PHP, JavaScript, jQuery, AJAX, HTML, and CSS technologies.
- Worked on deployment and hosting-related topics within IIS and Linux-based environments.

Technologies & Tools

EARLIER PROFESSIONAL EXPERIENCE

2009 - 2012

Hippopotamus – Student Employee (Restaurant Service)

Worked as a waiter alongside studies in a high-volume restaurant environment near Paris Bercy, handling customer service, operational coordination, and fast-paced service periods reaching several hundred customers per evening.

Key Responsibilities

- Worked under sustained operational pressure during high-volume restaurant service periods.
- Regularly interacted with international customers in a fast-paced hospitality environment.
- Occasionally coordinated service activities and assisted colleagues during peak periods.
- Developed discipline, adaptability, teamwork, and customer-facing communication skills.

Languages used

French (*daily, native*) English (*occasionally*)

HIPPOPOTAMUS

2009 - 2012

Hippopotamus is a French restaurant chain specializing in grill and brasserie-style dining, operating high-volume restaurants across France.
The Paris Bercy restaurant, located within Bercy Village near the Accor Arena (formerly Bercy Arena), operated in a particularly high-traffic environment driven by tourism, events, concerts, and weekend activity.

AFTI

09/2013 - 09/2015
CFA AFTI is a French apprenticeship training center specializing in information technology and telecommunications, founded by Thales Group and closely connected to industry.
Its programs are largely designed and delivered by practicing engineers, combining academic instruction with hands-on professional experience through work-study training.

Orsay, France

UPEC

09/2009 - 06/2013
Université Paris-Est Créteil (UPEC) is a public multidisciplinary university located in the Paris region, offering undergraduate and graduate programs across science, engineering, health, and social sciences.
It serves a large and diverse student population and is part of the French public higher education system.
The IUT Sénart-Fontainebleau, a technical faculty of UPEC, provides vocational and professionally oriented programs in applied sciences and information technology.
The Fontainebleau campus of IUT Sénart-Fontainebleau focuses on smaller cohorts and close collaboration with local industries, delivering practice-oriented training through programs such as the University Diploma of Technology (DUT) and professional bachelor's degrees.
