INTERESTS

⚙️ ADSN - LEAD SOFTWARE ENGINEER

08/2024 - 10/2025

Technical co-leadership on a nationwide apostilles and legalizations platform for the French notariat, a critical project supporting the profession's digital transformation and compliance requirements.

Key Responsibilities

- Coordinated the daily work of eight developers through technical guidance, task allocation, code reviews, and delivery follow-up.
- Co-led the technical design and implementation of the platform, ensuring compliance with legal, security, and interoperability requirements.
- Developed and maintained backend and frontend components, including REST APIs (Spring Boot), business services, security layers, and Angular user interfaces.
- Maintained and upgraded frameworks and dependencies to mitigate known security vulnerabilities (CVEs) and improve platform stability.
- Implemented automated testing and CI/CD pipelines to improve code quality and deployment reliability.
- Estimated development effort and provided regular progress reporting to stakeholders.
- Collaborated with integration, qualification, and operations teams to investigate issues, support deployments, and ensure smooth production readiness.
- Participated in critical production rollouts, including deployment support, live monitoring, issue resolution, and post-release stabilization.

ADSN - LEAD SOFTWARE ENGINEER

09/2023 - 07/2024

Technical leadership on ECA (Espace Client ADSN), a modular micro-frontend platform designed to centralize access to ADSN web applications for the French notariat.

Key Responsibilities

- Led a team of two developers through technical guidance, task coordination, code reviews, and architectural decision-making.
- Designed (with my architect) and implemented the platform architecture from scratch using Angular Module Federation and distributed Spring Boot APIs.
- Developed a modular ecosystem composed of a central portal and multiple independently deployed micro-frontend applications.
- Defined communication patterns between backend services and frontend modules to support cross-application features and integrations.
- Collaborated with other development portfolios to integrate externally developed modules into the platform ecosystem.
- Developed shared libraries and transversal features, including authentication and authorization mechanisms based on Keycloak and internal standards.
- Integrated user interfaces from Figma mockups into the portal and micro-frontend applications while maintaining UI consistency across the platform.
- Implemented automated testing and CI/CD pipelines to improve code quality and deployment reliability.
- Estimated development effort and provided regular progress reporting to stakeholders.
- Collaborated with integration, qualification, and operations teams to investigate issues, support deployments, and ensure smooth production readiness.

⚙️ ADSN - CONFIRMED SOFTWARE ENGINEER

05/2022 - 08/2023

Technical contributions across multiple applications within ADSN's Central Files portfolio, focusing on high-priority developments and critical services for the French notariat.

Key Responsibilities

- Contributed to multiple business-critical applications within the ADSN portfolio, including FCDDV (centralized wills registry), BRI (real estate reference database), and the notariat's centralized videoconferencing directory.
- Developed and maintained backend services and batch processing applications using Spring technologies across multiple projects.
- Developed frontend and backend features for FCDDV using Angular and Spring-based APIs.
- Reworked the public homepage of FCDDV by integrating user interfaces from Figma mockups into the existing platform.
- Participated in the design and implementation of REST APIs and inter-application communication mechanisms.
- Investigated and resolved complex technical issues across multiple applications and environments.
- Contributed to technical discussions and implementation decisions by providing expertise on architecture, maintainability, and integration topics.
- Participated in development effort estimation and delivery planning for multiple projects.
- Collaborated with integration, qualification, and operations teams to support deployments and issue investigation.

⚙️ MONEXT - CONFIRMED SOFTWARE ENGINEER

01/2021 - 04/2022

Technical contributions to high-volume payment acquisition systems within the PayAvenue platform, processing millions of daily transactions for major retailers and acquiring banks in a PCI DSS environment.

Key Responsibilities

- Developed and maintained Spring Batch processing flows handling large-scale payment acquisition workflows, including retailer file integration, protocol conversion, aggregation processing, and outgoing bank file generation.
- Worked daily with banking protocols and payment standards such as CB2A, CB2C, NEXO, and JCB, including legacy hexadecimal formats, field mapping constraints, and acquiring bank-specific implementations.
- Contributed to secure payment-processing systems within a PCI DSS environment, including PAN tokenization, hashing mechanisms, secure exchanges, and transaction integrity constraints.
- Delivered new features and maintenance evolutions on critical acquisition services processing hundreds of thousands to millions of transactions per day depending on client activity and business periods.
- Implemented unit and integration tests, contributed to refactoring initiatives, and participated in technical discussions regarding maintainability, integration, and performance improvements.
- Worked directly with project managers and banking/retail stakeholders to clarify requirements, validate file format constraints, and prepare deliveries.
- Participated in code reviews, qualification support, integration activities, and production issue investigations alongside integration and operations teams.
- Contributed to Jenkins pipeline improvements and Git-based release workflows for development and qualification deployments.
- Developed selected administration interfaces using Vaadin alongside core backend payment-processing applications.

🔧 EXTIA - FULL-STACK CONSULTANT

09/2020 - 12/2020 (mission at Orange)

Technical contributions to Orange pricing and catalog management applications, supporting internal services used to manage telecom offers, pricing rules, and batch-processing workflows.

Key Responsibilities

- Contributed to the maintenance and evolution of pricing and catalog management applications used across Orange internal systems.
- Developed backend and frontend features using Spring Boot and Angular within a full-stack product team composed of backend, frontend, and full-stack developers.
- Designed and implemented a monitoring dashboard for Spring Batch workflows using Spring Actuator and Material to provide real-time visibility on batch execution states and operational metrics.
- Developed orchestration APIs and monitoring features allowing internal operational teams to supervise and interact with batch-processing workflows across the product ecosystem.
- Built a full-stack proof of concept combining Angular dashboards, periodic refresh mechanisms, and Spring Batch monitoring endpoints to validate the technical approach for the monitoring platform.
- Participated in technical discussions regarding implementation strategies, frontend architecture, batch orchestration, and monitoring workflows.
- Worked autonomously on transverse monitoring topics after rapidly gaining the trust of the technical lead and project team.
- Collaborated with qualification teams to support feature validation and delivery preparation.

🔧 EXTIA - FULL-STACK CONSULTANT

04/2020 - 08/2020 (mission at AVIS2SANTÉ)

Technical contributions across multiple web and mobile initiatives at AVIS2SANTÉ (A2S), a healthcare-oriented SME, supporting web platform evolution, connected-device integrations, and development process improvements during the COVID period.

Key Responsibilities

- Developed Joomla modules and integrations for healthcare-oriented web platforms, including appointment scheduling features and Stripe-based payment modules.
- Implemented reusable JavaScript-based frontend integrations within Joomla environments using lightweight libraries and custom module architectures.
- Contributed to the development of an Android proof of concept for connected-health synchronization using Kotlin and Android Studio.
- Worked on integrations with Withings and Google Fit APIs to synchronize weight and health-monitoring data between connected devices and A2S healthcare platforms.
- Participated in the design and evolution of mobile synchronization workflows, local storage mechanisms, and backend synchronization processes with Joomla-based services.
- Assisted and technically supported an Android/Kotlin apprentice developer by leveraging existing Java expertise and participating in architecture discussions around the mobile application.
- Collaborated with the CTO on development process improvements, including the implementation of GitLab-based version control workflows and shared development practices.
- Worked with high autonomy in a small multidisciplinary team, regularly presenting progress and proof-of-concept demonstrations to technical and business stakeholders.

Technical contributions to the PayAvenue payment platform at Monext, focusing on high-volume payment acquisition workflows and banking protocol integrations for major retail customers.

Key Responsibilities

- Developed and maintained Spring Batch processing flows for payment acquisition services handling large-scale retailer transaction workflows.
- Contributed to the implementation of Carrefour payment acquisition flows using NEXO protocols, supporting the transition from legacy banking formats such as CB2A and CB2C.
- Participated in the development of multi-acquisition workflows allowing several daily acquisition exchanges instead of a single end-of-day processing cycle.
- Implemented protocol conversion and banking integration logic to support communication between retailer payment systems and multiple acquiring banks.
- Worked on critical payment-processing constraints including acquisition scheduling windows, transaction aggregation, secure exchanges, and large transaction volumes.
- Contributed to maintenance, technical investigations, and evolution of Spring Batch services within a PCI DSS payment-processing environment.
- Participated in integration activities, qualification support, and delivery preparation for payment-processing applications.
- Collaborated with other developers on technical implementation topics related to payment protocols, batch orchestration, and banking integrations.

⚙️ NATIXIS - TRAINING PROGRAM

10/2015 - 01/2016

Technical training program within FIS/Clear2Pay development teams in Warsaw, Poland, focused on the Open Payment Framework (OPF), enterprise payment-processing workflows, and international development practices.

Key Responsibilities

- Integrated directly into Clear2Pay development teams to participate in the evolution and maintenance of OPF enterprise payment-processing components.
- Worked on OPF user interface components, BPEL orchestration workflows, and microservice-based integrations within a large-scale banking framework ecosystem.
- Contributed to debugging, feature adjustments, localization fixes, and workflow corrections within enterprise payment-processing applications.
- Participated in enterprise development processes involving Jira-based workflows, technical QA validation, TDD-oriented delivery processes, and structured development lifecycle practices.
- Worked daily in English within an international team composed mainly of Polish collaborators and some others nationalities across development, QA, business analysis, and technical leadership roles.
- Developed practical experience with banking XML formats, enterprise orchestration workflows, and large-scale payment-processing architectures.
- Acquired strong exposure to enterprise software engineering practices used within an international payment technology vendor environment.

⚙️ NATIXIS - SOFTWARE DEVELOPER

09/2013 - 09/2015

Work-study program contributing to DEFI, a retail securities custody platform used by Natixis Eurotitres to manage PEA and securities-account services for multiple banking networks within and outside the BPCE Group.

Key Responsibilities

- Contributed to the development and maintenance of OIC and Platine, two white-label web platforms dedicated respectively to public customers and banking-agency operations.
- Developed administration interfaces and business-support screens using Java, JSP, Hibernate, and IBM WebSphere technologies within a Java enterprise environment.
- Implemented frontend interactions and UI behaviors using HTML, CSS, JSP, and jQuery-based technologies, including drag-and-drop interactions on customer-facing applications.
- Worked on Oracle database mappings and business object integrations using Hibernate to replace manual SQL-based workflows.
- Developed middleware-oriented tooling to analyze and visualize message flows exchanged between Java applications and the DEFI COBOL mainframe backend systems.
- Participated in the implementation of analytics and usage-tracking solutions across customer-facing and agency-facing platforms.
- Contributed to qualification support and deployment preparation activities within large-scale enterprise banking environments.
- Rapidly gained autonomy on assigned development topics while working within structured enterprise software engineering processes.
