INTERESTS

 ADSN - LEAD SOFTWARE ENGINEER

08/2024 - 10/2025

Technical co-leadership on a nationwide apostilles and legalizations platform for the French notariat, a critical project supporting the profession’s digital transformation and compliance requirements.

Key Responsibilities

- Coordinated the daily work of eight developers through technical guidance, task allocation, code reviews, and delivery follow-up.
- Co-led the technical design and implementation of the platform, ensuring compliance with legal, security, and interoperability requirements.
- Developed and maintained backend and frontend components, including REST APIs (Spring Boot), business services, security layers, and Angular user interfaces.
- Maintained and upgraded frameworks and dependencies to mitigate known security vulnerabilities (CVEs) and improve platform stability.
- Implemented automated testing and CI/CD pipelines to improve code quality and deployment reliability.
- Estimated development effort and provided regular progress reporting to stakeholders.
- Collaborated with integration, qualification, and operations teams to investigate issues, support deployments, and ensure smooth production readiness.
- Participated in critical production rollouts, including deployment support, live monitoring, issue resolution, and post-release stabilization.

ADSN - LEAD SOFTWARE ENGINEER

09/2023 - 07/2024

Technical leadership on ECA (Espace Client ADSN), a modular micro-frontend platform designed to centralize access to ADSN web applications for the French notariat.

Key Responsibilities

- Led a team of two developers through technical guidance, task coordination, code reviews, and architectural decision-making.
- Designed (with my architect) and implemented the platform architecture from scratch using Angular Module Federation and distributed Spring Boot APIs.
- Developed a modular ecosystem composed of a central portal and multiple independently deployed micro-frontend applications.
- Defined communication patterns between backend services and frontend modules to support cross-application features and integrations.
- Collaborated with other development portfolios to integrate externally developed modules into the platform ecosystem.
- Developed shared libraries and transversal features, including authentication and authorization mechanisms based on Keycloak and internal standards.
- Integrated user interfaces from Figma mockups into the portal and micro-frontend applications while maintaining UI consistency across the platform.
- Implemented automated testing and CI/CD pipelines to improve code quality and deployment reliability.
- Estimated development effort and provided regular progress reporting to stakeholders.
- Collaborated with integration, qualification, and operations teams to investigate issues, support deployments, and ensure smooth production readiness.

⚙️ ADSN - CONFIRMED SOFTWARE ENGINEER

05/2022 - 08/2023

Technical contributions across multiple applications within ADSN's Central Files portfolio, focusing on high-priority developments and critical services for the French notariat.

Key Responsibilities

- Contributed to multiple business-critical applications within the ADSN portfolio, including FCDDV (centralized wills registry), BRI (real estate reference database), and the notariat's centralized videoconferencing directory.
- Developed and maintained backend services and batch processing applications using Spring technologies across multiple projects.
- Developed frontend and backend features for FCDDV using Angular and Spring-based APIs.
- Reworked the public homepage of FCDDV by integrating user interfaces from Figma mockups into the existing platform.
- Participated in the design and implementation of REST APIs and inter-application communication mechanisms.
- Investigated and resolved complex technical issues across multiple applications and environments.
- Contributed to technical discussions and implementation decisions by providing expertise on architecture, maintainability, and integration topics.
- Participated in development effort estimation and delivery planning for multiple projects.
- Collaborated with integration, qualification, and operations teams to support deployments and issue investigation.

⚙️ MONEXT - CONFIRMED SOFTWARE ENGINEER

01/2021 - 04/2022

Technical contributions to high-volume payment acquisition systems within the PayAvenue platform, processing millions of daily transactions for major retailers and acquiring banks in a PCI DSS environment.

Key Responsibilities

- Developed and maintained Spring Batch processing flows handling large-scale payment acquisition workflows, including retailer file integration, protocol conversion, aggregation processing, and outgoing bank file generation.
- Worked daily with banking protocols and payment standards such as CB2A, CB2C, NEXO, and JCB, including legacy hexadecimal formats, field mapping constraints, and acquiring bank-specific implementations.
- Contributed to secure payment-processing systems within a PCI DSS environment, including PAN tokenization, hashing mechanisms, secure exchanges, and transaction integrity constraints.
- Delivered new features and maintenance evolutions on critical acquisition services processing hundreds of thousands to millions of transactions per day depending on client activity and business periods.
- Implemented unit and integration tests, contributed to refactoring initiatives, and participated in technical discussions regarding maintainability, integration, and performance improvements.
- Worked directly with project managers and banking/retail stakeholders to clarify requirements, validate file format constraints, and prepare deliveries.
- Participated in code reviews, qualification support, integration activities, and production issue investigations alongside integration and operations teams.
- Contributed to Jenkins pipeline improvements and Git-based release workflows for development and qualification deployments.
- Developed selected administration interfaces using Vaadin alongside core backend payment-processing applications.
